Homework Sheet 7: Prime Numbers

THE SEIVE OF ERASTOSTHENES

Erastosthenes was a famous mathematician in Ancient Greece. He discovered a way of finding prime numbers known as the "Seive of Erastosthenes". A prime number is a number which is divisible only by itself and one. Note that 1 is *not* a prime number. Use five different coloured pens or pencils.

Follow the directions to find the prime numbers to 100.

- 1** Cross out 1 with a pencil.
- 2** Draw a circle around 2, 3 , 5 and 7 with the same pencil.
- 3** Use a different colour. Cross out all the multiples of 2, leaving 2 itself.
- 4** Use a third colour. Cross out all the multiples of 3, except for 3.
- 5** Use a fourth colour. Cross out all the multiples of 5, except for 5.
- 6** Use a fifth colour. Cross out all the multiples of 7, except for 7.
- 7** Use your first colour again. Draw circles around all the numbers that are left. These are the prime numbers to 100.
