

Autism Education Trust

Message from the Autistic Young Experts:

“Autism is a difference not a deficit. Differences are to be valued not ‘fixed’. My normal is different from your normal and the aim shouldn’t be conformity but wellbeing.”

What is autism?

Autistic children have differences in three areas of development. These are:

Social understanding and communication

Flexibility, information processing and understanding

Sensory processing and integration

We need to look at these differences in terms of both the strengths and challenges that might arise.

The impact of differences in these three areas

Differences in these three areas mean that autistic children may need more support:

- to engage appropriately in social interactions with others.
- to understand what is happening now and next.
- to process all the sensory information in their environment, resulting in discomfort and even distress.

Anger

Frustration

Anxiety

Autistic children often experience the environment and other people as unpredictable and this can result in feelings of **anxiety**, **frustration** and **anger**.

How you can help: Stop, Observe, Listen, Act

Monitor the physical and emotional well-being of autistic children and recognise signals that the child might be distressed, unwell, or in pain.

S

Stop

Put your assumptions to one side.

O

Observe

What is actually happening in the environment around the child; use all your senses.

L

Listen

What is the child trying to tell you? What are they anxious or distressed about?

A

Act

In a way that makes the child feel safe.

We are here to support and empower you

Do you work with autistic children? We have a lot of **FREE** resources and an **award-winning professional development programme** for you. Whether you have 5 minutes or a few hours to learn, visit: www.autismeducationtrust.org.uk and follow the **Autism Education Trust** on social media.
